 AQUADOR

The clever Hard-Top design provides shelter from the elements and plenty of shade, but can be quickly transformed, opening up so air can flow freely leaving space to take in some sun.

250HT

FLIPPER MARIN

PART OF NIMBUS GROUP

Design and layout of the 250 HT is unique, with no direct competitor that offers the same features and functionality in an 8-meter class boat. Large social area and cockpit all on one floor level, meaning improved access, safety, and functionality.

THE BEST OF ALL WORLDS

Unique is a term often used, but rarely merited. The 250 HT though, boasts characteristics and stand-alone features that no other boat in its class can match, including a hard-top design and unique layout that is quintessentially Aquador.

There are 8-meter boats that feature biminis, fully enclosed cabins, or fully open cockpits, but there is nothing quite like the Hard-Top design from which this model gets its name. Sitting at the helm, you are struck by the level of visibility in all directions

while the steering console is sleek, neat, modern and functional. Driven by a smooth and responsive outboard engine, efficiency to reach cruising speed is remarkable due to the 'AquaDynamic' hull that features throughout the Aquador range.

The forward cabin features a wide main sleeping berth, mid-berth divided by a privacy curtain, spacious head, and plenty of storage options... you'll have to remind yourself that you are on an 8-meter boat!
